

WELL DESIGNED
COMFORT
 FOR BODY AND MIND

INFRARED HEATED LOUNGER

- D-Coded Infrared Heated Loungers integrate perfectly with any type of environment to provide the highest level of luxury of relaxation.
- The heart of the lounge heating mechanism is the FIR mat with silver carbon conglomerate. Once the chair is connected to the power supply, the foil emits far-infrared light which penetrates four centimetres deep into the body (1,5 inch).
- The lounge's seat curve has been evaluated by orthopaedic specialists and approved by the Sports Rehabilitation Centre in Poland. It gives optimal spine posture and correct hip alignment.
- You can use our MIX & MATCH offer to create a lounge of your own preferences.
- All loungers are equipped with control panel and remote control and have all the certificated which allow for safe use and trade.
- Choose the seat material from the solid, highest quality wood like ASH, BIRCH or WALNUT and the sides from a wide array of colours and finishes.
- Please refer to our lounge Manual for more technical information.

All our components and varnishes are ECO-FRIENDLY.
